Introduction

Product Description

The MB950 ATX motherboard offers the latest Socket H (LGA1156) supporting the Intel® Core™ i7, Core™ i5, Core™ i3 processors or the Intel® Pentium® processor G6950, all developed on Intel's newest microarchitecture, formerly codenamed "Nehalem," and using Intel's 32nm and 45nm process technologies.

Designed as an enterprise-performance ATX motherboard, the MB950 is ideal for the latest generation of POS, kiosk, automation and multimedia applications such as gaming. Based on the Intel® Q57 chipset, the MB950 supports the processor-integrated graphics to provide two display streams in combination of the onboard VGA CRT and DVI-D video interfaces. Up to 16GB of maximum memory can be configured in four DDR3 socket at 1066/1333MHz.

In addition to the impressive computing performance, the board is equipped with high-end connectivity comprised of dual Gigabit LAN controllers, six SATA-II ports, one IDE, fourteen USB 2.0 ports, four COM ports and high-definition audio. Should greater performance or expansion be required, add-on cards can be connected to the onboard PCI-E(x16), PCI-E(x8) [(x4) Link], PCI-E(x1), four PCI, and ISA slot.

MB950 FEATURES

- Support Intel® Core™ i7 / Core™ i5 / Core™ i3 / Pentium® G6950 processors
- 4x DDR3 DIMM (w/o ECC), Max. 16GB
- 2x Gigabit LAN
- 6x SATA II, 14x USB 2.0, 4x COM
- 1x PCI-E(x16), 1x PCE-E(x8) [(x4) Link], 1x PCE-E(x1), 4x PCI, 1x ISA, 1x IDE, 1x CF
- Support dual display; VGA/DVI-D
- Support iAMT6.0 (MB950AF only)

-

Checklist

Your MB950 package should include the items listed below.

- The MB950 ATX motherboard
- This User's Manual
- 1 CD containing chipset drivers and flash memory utility
- Cable kit (IDE, Serial ATA)

MB950 Specifications

Product Name	MB950
Form Factor	Industrial Motherboard ATX
CPU Type	Intel® Core(TM) i3 / i5/ i7 Processor
CPU Speed	2.8GHz ~ 3.46GHz (73W)
Last Level Cache	4MB
CPU Socket	LGA1156
Chipset	Intel® Q57 PCH , 27x27 mm FCBGA
BIOS	AMI BIOS, support ACPI Function
Memory	DDRIII 1066/1333MHz - 240-pin DIMM x 4 (w/o ECC), Max.16GB
VGA / DVI	Clarkdale processor integrated graphic(2X), Two display streams supported in any combination of DP, DVI and VGA ; Dual Independent display - ASM 1142T level shifter for DVI - VGA
LAN	1. Q57 Gigabit MAC + PHY :Intel® 82578DM GbE 2. Intel® 82583V PCI-e Gigabit LAN controller x1
USB	Q57 built-in USB 2.0 host controller, supports 14 ports
Serial ATA	Q57 built-in SATA controller, supports 6 ports
Parallel IDE/ CF	JMicron JM368 (PCI-e to PATA) x1 for 1 PATA channel for IDE & CF - IDE 40 pin - CF x 1
PCI to ISA Bridge	ITE IT8888G x 1 for high ISA bus
Audio	Q57 built-in High Definition Audio controller + ALC888 Codec w/7.1 channels
LPC I/O	Winbond W83627UHG : COM1 (RS232/422/485), COM2(RS232), COM3 (RS232), COM4 (RS232) with pin-9 with power for 4 ports (500 mA for each port) Hardware monitor (2 thermal inputs, 4 voltage monitor inputs, VIDO-4 & 2 Fan Headers)
Digital IO	4 in & 4 out
iAMT	Q57 built-in iAMT 6.0 (MB950AF only)
KB/Mouse	Supports PS/2 Keyboard/Mouse connector
Expansion Slots	1x PCI-e(x16) slot, 1x PCI-e [x8 slot](x4) slot, 1x PCI-e(x1), 4x PCI slot, 1x ISA
Edge Connector	PS/2 for Keyboard and Mouse GbE LAN RJ45 + dual USB stack connector GbE LAN RJ45 + dual USB stack connector Dual DB9 stack connector x1 for COM 1 & 3 DVI-D + DB15 stack connector x 1 for DVI + VGA RCA Jack 3x2 for HD Audio
On Board Header/Connector	2 x 5-pins header x 5 for 10 USB ports 12-pin header x1 for front audio outputs 10-pin box header x 2 for COM 2, 4 3-pin fan pin header x2 3-pin System fan pin header x1 (DC fan) 4-pin CPU fan pin header x1 (PWM fan control) 2 x 4 pins header for Digital I/O 5-pin header x 1 for IrDA 26-pin header x 1 for Parallel
Watchdog Timer	Yes (256 segments, 0, 1, 2...255 sec/min)
System Voltage	+5V, +3.3V, +12V, -12V, 5VSB
Other	LAN Wakeup
Board Size	305mm x 244mm

Board Dimensions

Installations

This section provides information on how to use the jumpers and connectors on the MB950 in order to set up a workable system. The topics covered are:

Installing the CPU	6
Installing the Memory	7
Setting the Jumpers.....	8
Connectors on MB950.....	12

Installing the CPU

The MB950 board supports an LGA1156 Socket (shown below) for Intel Clarkdale processors.

To install the CPU, unlock first the socket by pressing the lever sideways, then lift it up to a 90-degree. Then, position the CPU above the socket such that the CPU corner aligns with the gold triangle matching the socket corner with a small triangle. Carefully insert the CPU into the socket and push down the lever to secure the CPU. Then, install the heat sink and fan.

NOTE: *Ensure that the CPU heat sink and the CPU top surface are in total contact to avoid CPU overheating problem that would cause your system to hang or be unstable.*

Installing the Memory

The MB950 board supports four DDR3 memory socket for a maximum total memory of 16GB in DDR3 DIMM memory type.

Installing and Removing Memory Modules

To install the DDR3 modules, locate the memory slot on the board and perform the following steps:

1. Hold the DDR3 module so that the key of the DDR3 module aligned with that on the memory slot.
2. Gently push the DDR3 module in an upright position until the clips of the slot close to hold the DDR3 module in place when the DDR3 module touches the bottom of the slot.
3. To remove the DDR3 module, press the clips with both hands.

Setting the Jumpers

Jumpers are used on MB950 to select various settings and features according to your needs and applications. Contact your supplier if you have doubts about the best configuration for your needs. The following lists the connectors on MB950 and their respective functions.

BIOS Setup

This chapter describes the different settings available in the AMI BIOS that comes with the board. The topics covered in this chapter are as follows:

BIOS Introduction	22
BIOS Setup	22
Main BIOS Setup	23
Advanced Settings	24
PCIPnP Settings	35
Boot Settings	37
Security Settings	38
Advanced Chipset Settings	39
Exit Setup	42
Load Optimal Defaults	42
Load Failsafe Defaults	42

BIOS Introduction

The BIOS (Basic Input/Output System) installed in your computer system's ROM supports Intel processors. The BIOS provides critical low-level support for a standard device such as disk drives, serial ports and parallel ports. It also adds virus and password protection as well as special support for detailed fine-tuning of the chipset controlling the entire system.

BIOS Setup

The BIOS provides a Setup utility program for specifying the system configurations and settings. The BIOS ROM of the system stores the Setup utility. When you turn on the computer, the BIOS is immediately activated. Pressing the key immediately allows you to enter the Setup utility. If you are a little bit late pressing the key, POST (Power On Self Test) will continue with its test routines, thus preventing you from invoking the Setup. If you still wish to enter Setup, restart the system by pressing the "Reset" button or simultaneously pressing the <Ctrl>, <Alt> and <Delete> keys. You can also restart by turning the system Off and back On again. The following message will appear on the screen:

Press to Enter Setup

In general, you press the arrow keys to highlight items, <Enter> to select, the <PgUp> and <PgDn> keys to change entries, <F1> for help and <Esc> to quit.

When you enter the Setup utility, the Main Menu screen will appear on the screen. The Main Menu allows you to select from various setup functions and exit choices.

Main BIOS Setup

This setup allows you to view processor configuration used in your computer system and set the system time and date.

BIOS SETUP UTILITY						
Main	Advanced	PCIPnP	Boot	Security	Chipset	Exit
System Overview Processor Intel(R) Core(TM) i5 CPU 660 @ 3.33GHz Speed : 3333MHz Count : 1 System Memory Size : 8056MB System Time [02:29:50] System Date [Fri 01/02/2009]				Use[ENTER], [TAB] or [SHIFT-TAB] to select a field. Use [+] or [-] to configure system Time. <- Select Screen ↑ ↓ Select Item +- Change Field Tab Select Field F1 General Help F10 Save and Exit ESC Exit		

Note: *If the system cannot boot after making and saving system changes with Setup, the AMI BIOS supports an override to the CMOS settings that resets your system to its default.*

Warning: *It is strongly recommended that you avoid making any changes to the chipset defaults. These defaults have been carefully chosen by both AMI and your system manufacturer to provide the absolute maximum performance and reliability. Changing the defaults could cause the system to become unstable and crash in some cases.*

Advanced Settings

The CPU Configuration menu shows the following CPU details including the manufacturer, CPU type, its frequency and cache levels. Other options include:

Ratio CMOS Setting

Sets the ratio between CPU core clock and the FSB frequency.

MPS and ACPI MADT ordering

Modern ordering for Windows XP or later OSes. Legacy ordering for Windows 2000 or earlier OSes.

Max CPU ID Value Limit

Disabled for Windows XP.

Intel Virtualization Tech

When enabled, a VMM can utilize the additional HW Caps. Provided by Intel Virtualization Tech. Note: A full reset is required to change the setting.

Intel HT Technology

When disabled, only one thread per enabled core is enabled.

Active Processor Cores

Number of cores to enable in each processor package.

A20M

Legacy OSes and Aps may need A20 M enabled.

Intel PPM Configuration

This configuration includes the following options:

Intel SpeedStep tech

Disable: Disable GV3 Enable: Enable GV3

Intel TurboMode tech

Turbo mode allows processor cores to run faster than marked frequency in specific condition.

Intel C-STATE tech

CState: CPU idle is set to C2/C3/C4.

C State package limit setting

Selected option will program into C State package limit register.

C3 State / C6 State

Nehalem C state action select.

C1 Auto Demotion

When enabled, CPU will conditionally demote C3/C6/C7 requests to C1 based on uncore auto-demote information.

C1 Auto Demotion / C3 Auto Demotion

When enabled, CPU will conditionally demote C6/C7 requests to C3 based on uncore auto-demote information.

Restore on AC Power Loss			[Power Off]			
Power On Function			[None]			
				<- Select Screen ↑ ↓ Select Item +- Change Field Tab Select Field F1 General Help F10 Save and Exit ESC Exit		

Onboard Serial Port/Parallel Port

These fields allow you to select the onboard serial ports and their addresses. The default values for these ports are:

Serial Port 1	3F8
Serial Port 2	2F8/
Serial Port 3	3E0/IRQ10
Serial Port 4	Disabled
Parallel Port	378/IRQ7

Parallel Port Mode

This field allows you to determine parallel port mode function.

SPP	Standard Printer Port
EPP	Enhanced Parallel Port
ECP	Extended Capabilities Port
ECP+EPP	Combination of ECP and EPP capabilities
Normal	Normal function

Restore on AC Power Loss

This field sets the system power status whether *on* or *off* when power returns to the system from a power failure situation.

Power On Function

This field is related to how the system is powered on . The options are *None*, *Mouse Left*, *Mouse Right*, and *Any Key*.

Clear NVRAM

This item is used for clearing NVRAM during system boot.

Plug & Play O/S

This lets BIOS configure all devices in the system or lets the OS configure PnP devices not required for boot if your system has a Plug and Play OS.

PCI Latency Timer

This item sets value in units of PCI clocks for PCI device latency timer register. Options are: 32, 64, 96, 128, 160, 192, 224, 248.

Allocate IRQ to PCI VGA

This assigns IRQ to PCI VGA card if card requests IRQ or doesn't assign IRQ to PCI VGA card even if card requests an IRQ.

Palette Snooping

This informs the PCI devices that an ISA graphics device is installed in the system so the card will function correctly.

PCI IDE BusMaster

This uses PCI busmastering for BIOS reading / writing to IDE devices.

OffBoard PCI/ISA IDE Card

Some PCI IDE cards may require this to be set to the PCI slot number that is holding the card. **AUTO**: Works for most PCI IDE cards.

IRQ#

Use the IRQ# address to specify what IRQs can be assigned to a particular peripheral device.

Reserved Memory Size

Size of memory block to reserve for legacy ISA devices.

Boot Settings

This option configures the settings during system boot including boot device priority and HDD/CD/DVD drives.

BIOS SETUP UTILITY						
Main	Advanced	PCIPnP	Boot	Security	Chipset	Exit
Boot Settings ► Boot Settings Configuration ► Boot Device Priority ► Hard Disk Drives			Configure Settings during System Boot. <- Select Screen ↑ ↓ Select Item +- Change Field Tab Select Field F1 General Help F10 Save and Exit ESC Exit			

Boot Settings Configuration

This configuration includes the following items:

Quick Boot - Allows BIOS to skip certain tests while booting. This will decrease the time needed to boot the system.

Quiet Boot – *Disabled*: Displays normal POST messages. *Enabled*: Displays OEM Logo instead of POST messages.

Bootup Num-Lock – Select Power-on state for Numlock.

PS/2 Mouse Support – Select support for PS/2 Mouse.

Wait for 'F1' If Error – Wait for F1 key to be pressed if error occurs.

Hit 'DEL' Message Display – Displays “Press DEL to run Setup” in POST.

Interrupt 19 Capture – This allows option ROMs to trap interrupt 19.

Boot Device Priority

This specifies the boot sequence from the available devices. A device enclosed in parenthesis has been disabled in the corresponding type menu.

Hard Disk Drives

This specifies the Boot Device Priority sequence from available Hard Drives.

Security Settings

This setting comes with two options set the system password. Supervisor Password sets a password that will be used to protect the system and Setup utility. User Password sets a password that will be used exclusively on the system. To specify a password, highlight the type you want and press <Enter>. The Enter Password: message prompts on the screen. Type the password and press <Enter>. The system confirms your password by asking you to type it again. After setting a password, the screen automatically returns to the main screen.

To disable a password, just press the <Enter> key when you are prompted to enter the password. A message will confirm the password to be disabled. Once the password is disabled, the system will boot and you can enter Setup freely.

Memory Remap Feature

This allows remapping of overlapped PCI memory above the total physical memory.

DRAM Frequency

The options are *Auto*, *1067 MHz* and *1333 MHz*.

Configure DRAM Timing by SPD

The options are *Auto* and *Manual*.

Memory Hole

This option is used to reserve memory space between 15MB and 16MB for ISA expansion cards that require a specified area of memory to work properly.

Initiate Graphic Adapter

This option selects which graphics controller to use as the primary boot device.

IGD Graphics Mode Select

This option selects the amount of system memory used by the internal graphics device.

PEG Port

The options are *Auto* and *Disabled*.

PEG Force GEN1

Some non-graphics PCI-E devices may not follow PCI-E specifications and may incorrectly report their GEN capability or link width.

Video Function Configuration

The configuration allows setting to DVMT/FIXED memory.

					<- Select Screen ↑ ↓ Select Item +- Change Field Tab Select Field F1 General Help F10 Save and Exit ESC Exit	

HDA Controller

This option is used to enable the Southbridge high definition audio controller.

BIOS SETUP UTILITY

Main	Advanced	PCIPnP	Boot	Security	Chipset	Exit
ME Subsystem Configuration						
Management Engine Version :			N/A			
					<- Select Screen ↑ ↓ Select Item +- Change Field Tab Select Field F1 General Help F10 Save and Exit ESC Exit	

Exit Setup

The exit setup has the following settings which are:

BIOS SETUP UTILITY						
Main	Advanced	PCIPnP	Boot	Security	Chipset	Exit
Exit Options Save Changes and Exit Discard Changes and Exit Discard Changes Load Optimal Defaults Load Failsafe Defaults				Exit system setup after saving the changes. <- Select Screen ↑ ↓ Select Item +- Change Field Tab Select Field F1 General Help F10 Save and Exit ESC Exit		

Save Changes and Exit

This option allows you to determine whether or not to accept the modifications and save all changes into the CMOS memory before exit.

Discard Changes and Exit

This option allows you to exit the Setup utility without saving the changes you have made in this session.

Discard Changes

This option allows you to discard all the changes that you have made in this session.

Load Optimal Defaults

This option allows you to load the default values to your system configuration. These default settings are optimal and enable all high performance features.

Load Failsafe Defaults

This option allows you to load the troubleshooting default values permanently stored in the BIOS ROM. These default settings are non-optimal and disable all high-performance features.

Drivers Installation

This section describes the installation procedures for software and drivers under the Windows 2000, Windows XP and Windows Vista. The software and drivers are included with the board. If you find the items missing, please contact the vendor where you made the purchase. The contents of this section include the following:

Intel Chipset Software Installation Utility	44
Intel Graphics Driver Installation	46
Realtek HD Codec Audio Driver Installation.....	48
LAN Drivers Installation	49
Intel® Management Engine Interface	51

IMPORTANT NOTE:

After installing your Windows operating system (Windows 2000/XP/Vista), you must install first the Intel Chipset Software Installation Utility before proceeding with the drivers installation.

Intel Chipset Software Installation Utility

The Intel® Chipset Drivers should be installed first before the software drivers to enable Plug & Play INF support for Intel chipset components. Follow the instructions below to complete the installation under Windows 2000/XP/Vista. (Before installed Intel Chipset Software Installation Utility, Please update your system to Windows 2000 SP4 or Windows XP SP1A)

1. Insert the DVD that comes with the board. Click **Intel** and then **Intel(R) Chipset Software Installation Utility**.

3. When the Welcome screen appears, click **Next** to continue.
4. Click **Yes** to accept the software license agreement and proceed with the installation process.
5. On the Readme Information screen, click **Next** to continue the installation.

6. When the Setup Progress screen appears, click **Next** to continue.

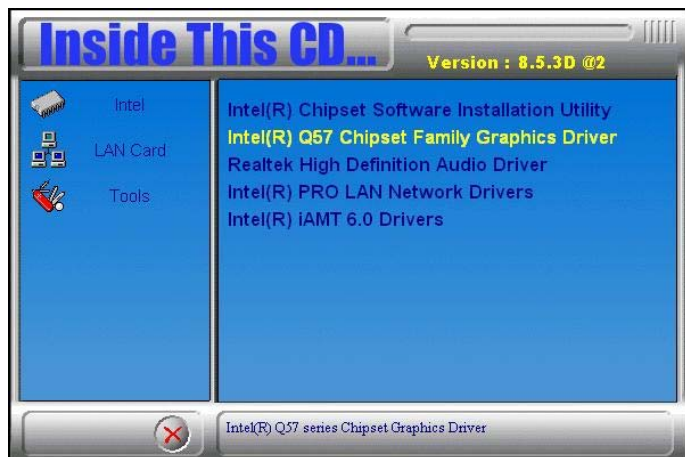

7. The Setup process is now complete. Click **Finish** then restart the computer and for changes to take effect.

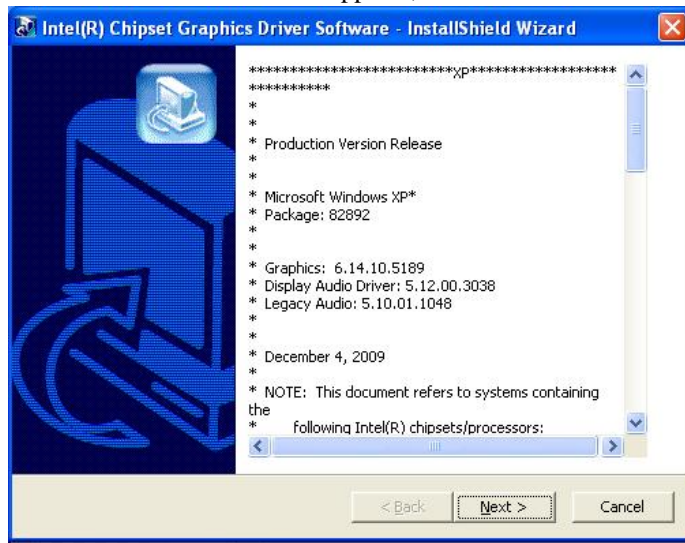

Intel Graphics Driver Installation

1. Insert the DVD that comes with the board. Click **Intel** -> **Intel® Q57 Chipset Family Graphics Driver**.

2. When the InstallShield Wizard screen appears, click **Next**.

3. When the Welcome screen appears, click **Next** to continue.

4. Click **Yes** to accept the software license agreement and proceed with the installation process.
5. On Readme File Information screen, click **Next** to continue.
6. On Setup Progress screen, click **Next** to continue the installation.

7. The Setup process is now complete. Click **Finish** to restart the computer and for changes to take effect.

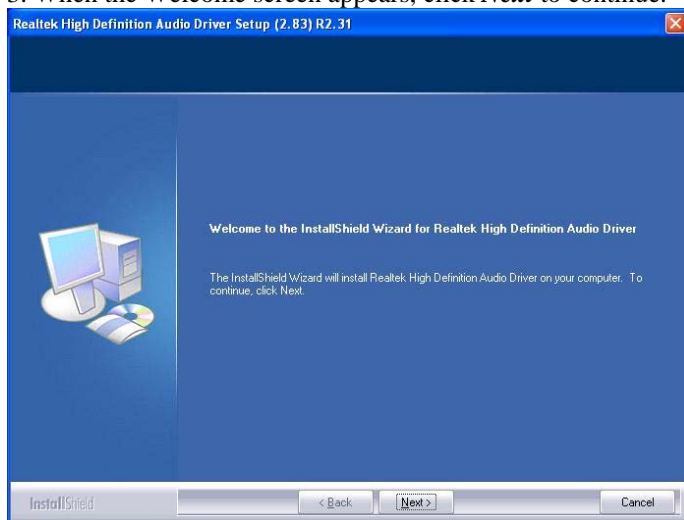

Realtek HD Codec Audio Driver Installation

1. Insert the DVD that comes with the board. Click **Intel** and then **Realtek High Definition Audio Driver**.

2. Click **Realtek High Definition Codec Audio Driver**.

3. When the Welcome screen appears, click **Next** to continue.

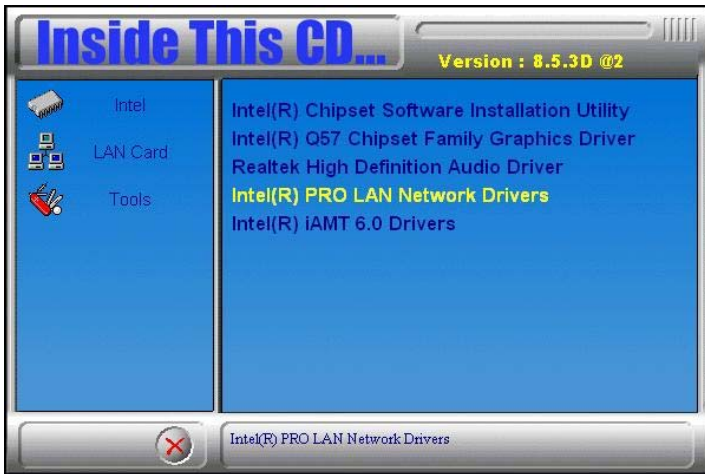

4. The Setup process is now complete. Restart the computer when prompted for changes to take effect.

LAN Drivers Installation

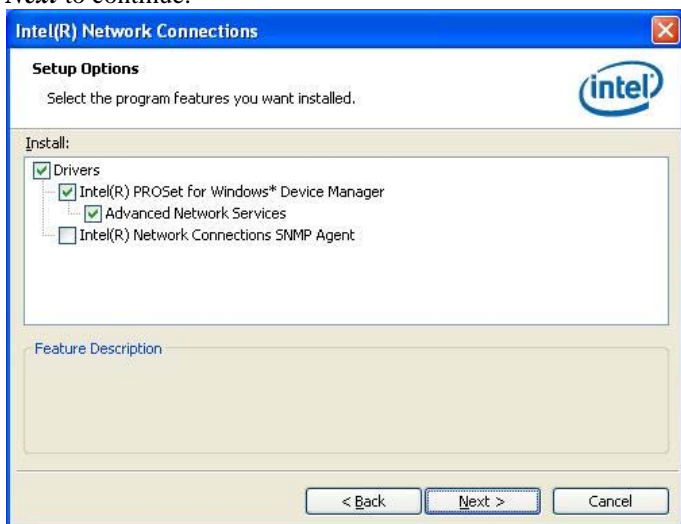

Follow the steps below to start installing the Intel 82578DM or Intel 82583V LAN drivers.

1. Insert the DVD that comes with the board. Click **Intel** and then **Intel(R) PRO LAN Network Drivers**.
2. Click **Intel(R) PRO LAN Network Drivers**.

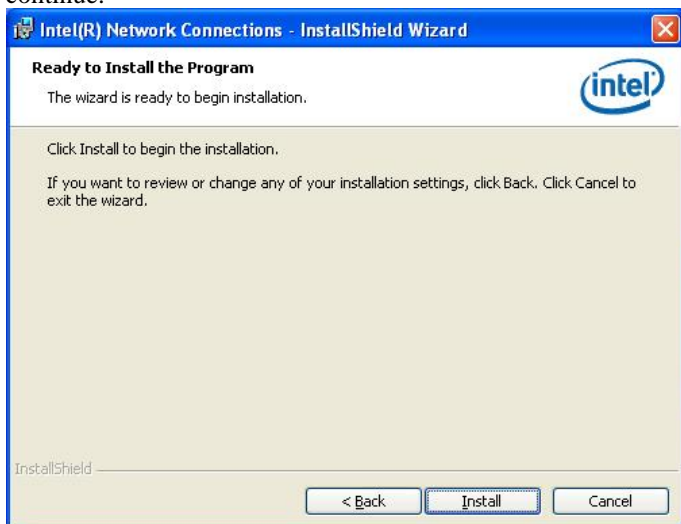

3. On the next screen, click **Install Drivers** to start the drivers installation.
4. When the Welcome screen appears, click **Next** to continue.
5. In the License Agreement screen, click **I accept the terms in license agreement** and **Next** to accept the software license agreement and proceed with the installation process.

6. When the Setup Options appears, click **Drivers** as shown below and **Next** to continue.

7. When the Ready to Install the Program screen appears, click **Install** to continue.

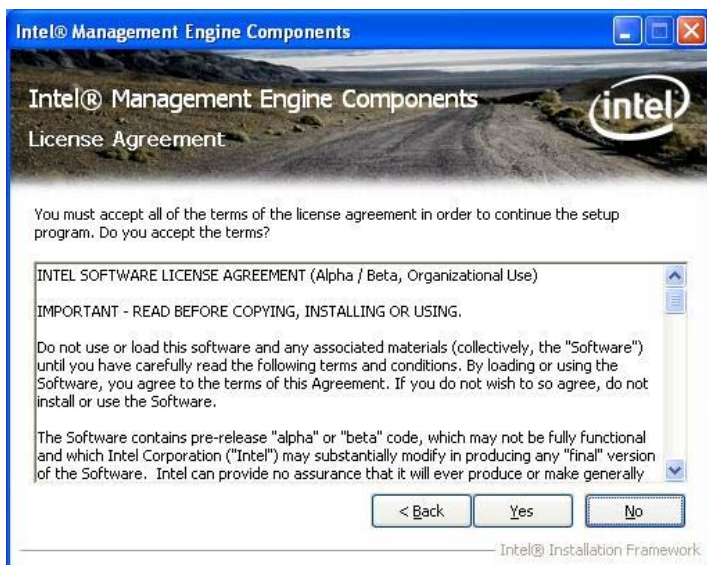

8. The Setup process is now complete (InstallShield Wizard Completed). Click **Finish** to restart the computer and for changes to take effect.

Intel® Management Engine Interface

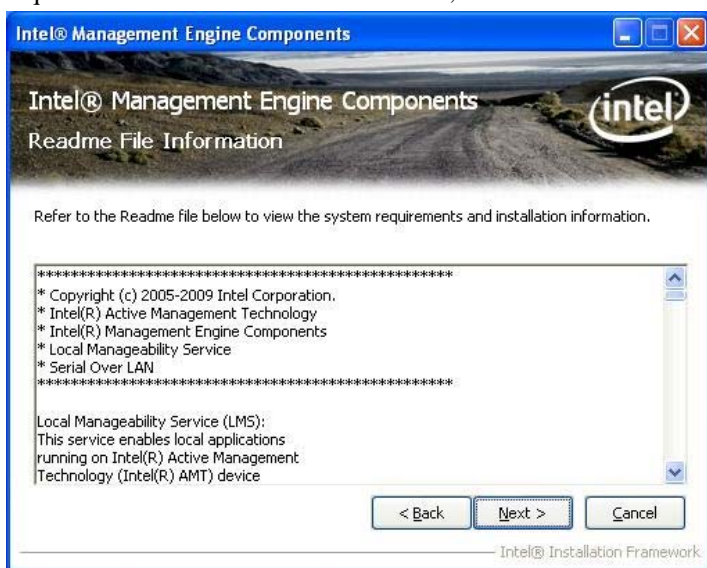

REMARKS: The Intel iAMT 6.0 Drivers can be installed on MB950AF, not MB950F.

1. Insert the drivers disc that comes with the motherboard. Click **Intel** and then **Intel(R) AMT 6.0 Drivers**. When the welcome screen of the Intel® Management Engine Components appears, click **Next** to continue. On the next screen, click **Next** to agree to the license agreement.

2. On the next screen, the Readme File Information shows the system requirements and installation information, click *Next*.

3. When the Setup Progress screen appears, click **Next** to continue. Then, click **Finish** when the setup progress has been successfully installed to restart the computer.

This page is intentionally left blank.

Appendix

A. I/O Port Address Map

Each peripheral device in the system is assigned a set of I/O port addresses which also becomes the identity of the device. The following table lists the I/O port addresses used.

Address	Device Description
000h - 01Fh	DMA Controller #1
020h - 03Fh	Interrupt Controller #1
040h - 05Fh	Timer
060h - 06Fh	Keyboard Controller
070h - 07Fh	Real Time Clock, NMI
080h - 09Fh	DMA Page Register
0A0h - 0BFh	Interrupt Controller #2
0C0h - 0DFh	DMA Controller #2
0F0h	Clear Math Coprocessor Busy Signal
0F1h	Reset Math Coprocessor
1F0h - 1F7h	IDE Interface
2E8h - 2FFh	Serial Port #4(COM4)
2F8h - 2FFh	Serial Port #2(COM2)
2B0 - 2DF	Graphics adapter Controller
3C0 - 3CF	EGA adapter
3D0 - 3DF	CGA adapter
3E8h - 3EFh	Serial Port #3(COM3)
3F8h - 3FFh	Serial Port #1(COM1)

B. Interrupt Request Lines (IRQ)

Peripheral devices use interrupt request lines to notify CPU for the service required. The following table shows the IRQ used by the devices on board.

Level	Function
IRQ0	System Timer Output
IRQ1	Keyboard
IRQ2	Interrupt Cascade
IRQ3	Serial Port #2, 4
IRQ4	Serial Port #1, 3
IRQ5	Reserved
IRQ6	Reserved
IRQ8	Real Time Clock
IRQ9	Reserved
IRQ10	Reserved
IRQ11	Reserved
IRQ12	PS/2 Mouse
IRQ13	80287
IRQ14	Primary IDE
IRQ15	Secondary IDE

C. Watchdog Timer Configuration

The WDT is used to generate a variety of output signals after a user programmable count. The WDT is suitable for use in the prevention of system lock-up, such as when software becomes trapped in a deadlock. Under these sorts of circumstances, the timer will count to zero and the selected outputs will be driven. Under normal circumstance, the user will restart the WDT at regular intervals before the timer counts to zero.
