

Conflict Minerals Policy Statement

Sources of specified minerals, referred to as conflict minerals are Tin(Sn), Tungsten(W), Tantalum(Ta) and Gold(Au), is a concern.

Conflict minerals originating from the Democratic Republic of the Congo(DRC) and nearby regions can make their way into the supply chains of the products used in the electronics industry. This region has been termed a “conflict region” because illegal mining profits are contributing to human rights abuses.

IBT Technologies Inc. does not source or buy metals directly as we only sell finished products and is not involved in any manufacturing. Nevertheless, we support the work of the Electronic Industry Citizenship Coalition (EICC) and the Global e-Sustainability Initiative (GeSI) to better understand how prevalent conflict minerals are in the electronics industry and how they can effectively influence human rights and environmental issues associated with the mining of these metals.

IBT is committed to source only products from suppliers that are Minerals conflict-free. Majority of products that we sell are sourced from manufacturers who are members of EICC/CFSI including these companies.
